

## **Fuel Rail Service**

Valvoline Professional Series (VPS) Fuel Rail Service is specifically designed to rid the fuel system of harmful deposits.

Deposits in the fuel system reduce fuel economy, impair drivability, and interfere with the proper operation of an engine. Deposits are a by-product of the engine's internal combustion process and need to be removed on a regular basis. VPS Fuel Rail Service instantly removes deposits from the entire fuel & air intake system including: fuel injectors, intake valves, and combustion chambers, throttle body and entire air intake system. Helps to:

- Restore maximum power and performance
- Eliminate rough idle and hesitation
- Reduce emissions caused by deposits
- Restore engine efficiency and fuel economy
