

## **Cooling System Service**

Helps extend the life of the cooling system components, keeps the entire system clean, and functioning as efficiently as possible.

Cooling system failures are the leading cause of mechanical breakdown on the road according to the U.S. Department of Transportation. - Antifreeze/Coolant gradually loses its protective qualities, allowing corrosion and deposits to form. This build-up chokes off the proper flow of the coolant and may lead to overheating, freeze ups in the winter, breakdown and/or costly repairs which may exceed \$2,000.
